

# Checklist:

## 10 Ways To Check The Efficiency Of Your Mixed Industrial Fleet

**Does your rental, dealership,  
or construction company  
have the tools to succeed  
in Australia in 2023?**

Complete the checklist and learn how technology can save your business time and money.

## I know the exact location of my machines, in real time.

With **GPS Tracking**, you can find each machine quickly for pick-up at the end of a rental period, site visit, or for maintenance, even when the machine is not in operation.

## I have accurate information for billing.

With the **Real-Time Monitoring** of machines, you have accurate data to communicate with your customers about usage so you can maximise rental or sub-leasing incomes.

## I can always find my machines if they're stolen.

**Geofencing** technology allows you to set virtual boundaries and receive immediate notifications if a machine exceeds your set limits.

## I always have all the data I need to insure my machine.

Data provided by telematics systems, such as **Geofencing** or **Location History**, means you have instant evidence for insurance cover in case of theft.

## I have the insights to invest (and disinvest) machines.

With telematics **Usage Reporting**, you see which machines are used most often in which locations (and which aren't) for optimal fleet composition.

## I always avoid the undesired sub-letting of my machines.

**Track-and-Trace** functionalities such as location history ensure you know that your machines are not being used anywhere else without your knowledge.

## I receive notifications when machines need periodic maintenance.

**Automatic Service Estimation Notifications** save your technicians precious time on periodic maintenance and provide them with all the information they need for a quick and accurate intervention.

## I have very few machine breakdowns.

By enabling preventative maintenance through functionalities such as **Impact Detection** and **Asset Utilisation**, you can minimise breakdowns and downtime.

## I maximise the number of clients I can service each day

**Remote Diagnostics** enable you to service higher numbers of rental customers, dealership clients, or construction partners in a more efficient manner.

## I avoid the unnecessary wear of my industrial batteries

By monitoring various parameters on your expensive industrial batteries through **Battery Monitoring**, you can avoid their unnecessary wear, maximise their charge cycles, and prolong battery lifespan.

We deliver a system that meets your company's needs today and responds to the challenges your business will face tomorrow.

**Discover how GemOne telematics can make your industrial fleet safer and more efficient.**
