Introducing
Our <mark>Series 2</mark> AI Camera

Why opt for the latest model?

Make your workplace safer:
Detect personnel in the line of travel and alert operators with an audible and visual warning when pedestrians are within proximity of your machines.

Truck-to-Truck Detection:
Advanced camera technology identifies surrounding forklifts and machinery, preventing collisions in high-traffic areas through real-time proximity alerts.

Streamline incident investigation:
Our cameras continuously record when the forklift is switched on.

How does the Series 2 AI Camera compare with our previous model?

AI Camera	1st gen	2nd gen
Plug and play install, no additional wiring required	✅	✅
Magnetic mounted custom bracket (no welding or drilling)	✅	✅
Visual and audible (max 90 db) notification when pedestrians are detected	✅	✅
Starlight night vision mode records in dimly-lit environments	✅	✅
Local footage playback: View video directly on the display screen	✅	✅
No need for dedicated DVR: 11 days of high res video (comes with SD card)	✅	✅
One single screen: Integrated into our Sapphire fleet and safety management solution	✅	✅
Accommodate up to 4 cameras all viewable on the same display	✅	✅
Default detection zone works out of the box	✅	✅
25 feet range for ease of use	✅	✅
Adjustable detection range	❌	✅
Cycle through pre-determined zones	❌	✅
Customisable detection zone to personal preference	❌	✅
Backwards compatible with all Sapphire V2SC displays	❌	✅
Upgraded algorithmic feedback (V2) based on previous years of data capture on V1	❌	✅
White noise reduction in detection zone (based on use cases database)	❌	✅
Make adjustments via a remote & receiver	❌	✅
1 single remote & receiver for multiple cameras	❌	✅

Level up your hardware:
Discover the future of your fleet—ask GemOne about integrating our AI camera technology into your operations.

Skip the rewiring:
These units are designed to be "Plug & Play" with your existing Sapphire display, SD card, and harness.
